DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6671020 ("020").

020 teaches first and second substrates [31 and 33]; gate and data lines [1 and 3] ; pixels [13]; TFTs [11]; a common electrode [17]; first and second domain defining members defining a plurality of domains in the liquid crystal layer [52,53]; wherein the drain is disposed near the corner of one domain [the drain 9 is disposed near the corner of 53 at the bottom of the figure].

In re claim 2, see figure 4, see 53 near the edges of the pixel.

In re claim 3, see figure 4.

In re claim 4, see the edge of drain 9 that is overlapping the gate line.

In re claim 7, see 43.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the

Art Unit: 2871

various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 6 rejected under 35 U.S.C. 103(a) as being unpatentable over 020. 020 lacks the cutouts in the common electrode. However, cutouts in the common electrode were well known for warping the electric field and improving viewing angle. Accordingly, it would have been obvious to one of ordinary skill at the time the invention was made to combine the well known common electrode cutouts with 020.

Allowable Subject Matter

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record fails to teach in combination with the above limitations the drain electrode has a plurality of edges and the edges of the drain electrode include a first edge extending perpendicular to the major edges of the domains and located closest to the center of the one of the domains.
